turnock's public health: what it is and how it works takes a clear systems-based approach to examining the modern U.S. public health system: its structure, functions, operations, and significance. The book is divided into two parts: part I covers the fundamental components of public health practice in the 21st-century United States, while part II presents case studies that illustrate public health in action. Together, these sections provide students with a comprehensive understanding of public health as both a system and a social enterprise, equipping them to apply their knowledge to real-world public health challenges, programs, and initiatives. Offering the latest data, updated tables, and new figures, the eighth edition also explores current concepts and trends, including the 10 essential public health services, ePHS, Healthy People 2030, and health equity in the wake of the COVID-19 pandemic. Other key updates include a new chapter on pandemic and all-hazards public health preparedness, which emphasizes the critical lessons learned from the COVID-19 pandemic and highlights the essential role of public health in safeguarding community health during emergencies; unique public health administration chapters explore managing public health infrastructure and public health programs; new case studies on COVID-19, firearms and health, and substance use; revised and expanded Out of the Book Thinking Boxes, as well as discussion questions to engage students in exploring concepts more deeply. Introductory Public Health Courses at the Graduate and Undergraduate Levels, 2026, 480 pages.

In times of crisis, whether due to disasters, armed conflicts, or other health emergencies, the timely and well-coordinated evacuation of patients is a critical component of emergency response. Past emergencies have demonstrated the urgent need for standardized approaches to both pre-hospital support for medical evacuation (medevac) and medevac operations themselves. The absence of clear protocols, coupled with delays, miscommunication, and inadequate care during transit, can severely impact patient outcomes. Establishing standardized procedures ensures that medical evacuations are conducted safely, efficiently, and in coordination with the broader health care and emergency response system. This guidance aims to provide a comprehensive framework for the safe and context-adapted coordination of clinical care, operations, support, and logistics relevant to governments, national authorities (including ministries of health, civil protection, and civil defence), national and international emergency medical teams, EMTs, nongovernmental organizations (NGOs), emergency medical services (EMS), and other key stakeholders operating in the medevac space or wishing to build this kind of capacity. It defines minimum standards and recommendations for the development and classification of respective specialized care teams (SCTs). This is particularly relevant for contexts without pre-existing or functional pre-hospital or medevac systems and can support country-level capacity building, regional and sub-regional planning, and the development of SCTs.
