big data thrives on extracting knowledge from a large number of data sets but how is an application possible when a single data set is several gigabytes in size the innovative data compression techniques from the field of machine learning and modeling using bayesian networks which have been theoretically developed and practically implemented here can reduce these huge amounts of data to a manageable size by eliminating redundancies in location time and between simulation results data reductions to less than 1 of the original size are possible the developed method represents a promising approach whose use goes far beyond the application example of crash test simulations chosen here

this book includes original peer reviewed research papers from the icaus 2021 which offers a unique and interesting platform for scientists engineers and practitioners throughout the world to present and share their most recent research and innovative ideas the aim of the icaus 2021 is to stimulate researchers active in the areas pertinent to intelligent unmanned systems the topics covered include but are not limited to unmanned aerial ground surface underwater systems robotic autonomous control navigation and positioning architecture energy and task planning and effectiveness evaluation technologies artificial intelligence algorithm bionic technology and its application in unmanned systems the papers showcased here share the latest findings on unmanned systems robotics automation intelligent systems control systems integrated networks modeling and simulation it makes the book a valuable asset for researchers engineers and university students alike

advancement of optical methods in experimental mechanics proceedings of the 2013 annual conference on experimental and applied mechanics the third volume of eight from the conference brings together contributions to this important area of research and engineering the collection presents early findings and case studies on a wide range of optical methods ranging from traditional photoelasticity and interferometry to more recent dic and dvc techniques and includes papers in the following general technical research areas optical metrology and displacement measurements at different scales digital holography and experimental mechanics optical measurement systems using polarized light surface topology digital image correlation optical methods for mems and nems three dimensional imaging and volumetric correlation imaging methods for thermomechanics applications 3d volumetric flow measurement applied photoelasticity optical residual stress measurement techniques advances in imaging technologies
