Interest Rate Derivatives

Interest Rate Swaps Interest rate swaps are agreements between two parties to exchange cash flows based on different interest rate benchmarks, typically a fixed rate versus a floating rate. They are instrumental in hedging interest rate exposure. Key features include: Notional amount: the principal on which payments are based Fixed leg and floating leg: differing interest payment structures Maturity: can range from short-term to long-term Applications: - Managing refinancing risk - Speculating on interest rate movements - Altering asset-liability profiles

Forwards: customized OTC agreements Credit Derivatives and Credit Risk Management Credit Default Swaps (CDS) CDS are contracts that transfer credit risk from one party to another. The buyer of a CDS pays periodic premiums in exchange for protection against default or credit deterioration of a reference entity.
