ca2 signaling in neurons is characterized by highly restricted and dynamic gradients called ca2 waves spikes transients and puffs depending upon their corresponding spatial and temporal features based on this strict segmentation the ca2 ion provides a versatile basis for complex signaling in neuronal subcompartments with a spatial resolution of micro and nanodomains the

multitude of  $Ca^{2+}$  regulated processes requires specialized downstream processing machinery translating the  $Ca^{2+}$  signal into alterations of cellular processes the broad range of different  $Ca^{2+}$  triggered phenomena in neurons ranging from neurotransmission to gene expression is reflected by the existence of a multitude of different  $Ca^{2+}$  binding proteins (CaBPs) from which numerous belong to the EF-hand super family EF-hand proteins can be subdivided into  $Ca^{2+}$  buffer and  $Ca^{2+}$  sensor proteins whereas the first group has a very high affinity for  $Ca^{2+}$  exhibits little conformational change in the  $Ca^{2+}$  bound state and is thought to mainly chelate  $Ca^{2+}$  the second group has a lower affinity for  $Ca^{2+}$  and shows considerable conformational changes upon  $Ca^{2+}$  binding which usually triggers a target interaction neuronal calcium sensor (NCS) proteins and the related caldendrin (CaBP) calneuron (NCaBP) proteins are members of this latter group they resemble the structure of their common ancestor calmodulin (CaM) with four EF-hand  $Ca^{2+}$  binding motifs of which not all are functional however despite their structural homology with CaM NCS as well as NCaBPs are quite diverse in amino acid sequence it is therefore surprising that relatively few binding partners have been identified that are not CaM targets and this raises the question of the specificity and function of these interactions in terms of function binding of NCS and NCaBP has frequently different consequences than binding of CaM which substantially increases the versatility of the  $Ca^{2+}$  tool kit the general idea of this special issue is to provide an overview on the function of neuronal EF-hand calcium binding proteins in health and disease but we will not just provide a mere collection of articles to stress the function of each protein the issue will mainly deal with emerging concepts on  $Ca^{2+}$  signaling buffering mediated by EF-hand  $Ca^{2+}$  binding proteins this includes questions like features that define the functional role of a EF-hand calcium sensor in neurons the conditions that make physiological relevance of a given interaction of a CaBP with its target plausible the emerging synaptic role of these proteins and mounting evidence for their role in the regulation of protein trafficking structural aspects and biophysical studies will be covered another aspect will be the role of CaBPs in brain disease states this aspect includes studies showing that CaBPs are targets of drugs in clinical use studies showing that expression levels of calcium binding proteins are frequently altered in brain disease states as well as reports on mutations in EF-hand calcium sensors linked to human disease

go beyond cómo se dice and add thousands of words to your Spanish vocabulary to communicate comfortably in Spanish you need access to a variety of words that go beyond the basics as well as a solid foundation in grammar in practice makes perfect Spanish vocabulary you get the tools you need to expand your lexicon and sharpen your speaking and writing skills and how do you this practice practice practice each chapter of this comprehensive book focuses on a theme such as family or travel so you can build your language skills in a systematic manner as you lay the foundation for a burgeoning vocabulary you will perfect your new words with plenty of exercises and gain the confidence you need to communicate well in Spanish this new edition of
