experimental political science has changed in two short decades it evolved from an emergent method to an accepted method to a primary method the challenge now is to ensure that experimentalists design sound studies and implement them in ways that illuminate cause and effect ethical boundaries must also be respected results interpreted in a transparent manner and data and research materials must be shared to ensure others can build on what has been learned this book explores the application of new designs the introduction of novel data sources measurement approaches and statistical methods the use of experiments in more substantive domains and discipline wide discussions about the robustness generalizability and ethics of experiments in political science by exploring these novel opportunities while also highlighting the concomitant challenges this volume enables scholars and practitioners to conduct high quality experiments that will make key contributions to knowledge

this established manual focuses on using non hazardous materials to teach the experimental nature of general chemistry experiments are written to address students of various academic backgrounds and differing interests and abilities in chemistry while most experiments can be conducted in a single three hour period some have been designed to be completed over an extended time to illustrate that chemical systems do not work at an arbitrary schedule suggestions are provided for combining experiments of shorter length and similar pedagogy
