bachelor thesis from the year 2003 in the subject business economics investment and finance grade 1 0 a edinburgh napier university business school 200 entries in the bibliography language english abstract for several decades academics have been looking for an efficient performance measure which not only reflects the effectiveness and efficiency of the firm but also aligns manager s and shareholder s interests even though many studies question the merit of a single measure for overall firm performance stern and stewart claim to have solved the puzzle with a method labeled economic value added eva this paper examines two aspects first eva s predicting power regarding stock returns and second its impact on management behavior as an element of executive compensation at first glance stern and stewart seem to be right during the early 1990s their approach gained tremendous popularity reflected by dozens of anecdotal success stories though eva s demand of integrating a total capital charge is appealing the concept is by no means new the framework of residual income economic profit which has been around for decades also requires a charge for equity capital further some scholars criticize the use of accounting adjustments in order

to calculate EVA and its ability to capture performance at the divisional level so far there is no independent empirical evidence that EVA is superior to accounting measures in predicting stock returns some studies even question EVA's incremental value regarding executive compensation by stating that economic profit is doing as good a job consequently it is tempting to doubt that economic value added indeed adds any value

the world of pricing has been changing at a fast pace there has been a development of new dynamic pricing strategies an explosion of new pricing tactics and a focus on smarter buyers this book focuses on those developments and highlights new perspectives for pricing strategies
